Testing Guide: Super Admin and Direct-Payment Customers

Oct 31, 2026 · @Sai Praneeth Reddy Yarram

Before you start

You need the app running, a terminal on the server (or your laptop for a local trial) and a browser. Start a local copy with `npm run build:frontend` then `npm run dev:local`, and open http://localhost:3001/login.

The demo accounts below exist only in a seeded database (local or test). Do not rely on them in production.

Account	Password	Role	What it sees
superadmin@liquor.com	Password@123	Super Admin	Platform Console only
owner@liquor.com	Password@123	Admin (Demo Liquor Syndicate, Standard plan)	Business Settings, all branch pages
manager@liquor.com	Password@123	Manager	Branch pages, staff, reports
cashier@liquor.com	Password@123	Cashier	POS, bills, shifts
steward@liquor.com	Password@123	Steward	Tables and KOT

Test 1: create your own Super Admin

One command creates (or resets) a Super Admin, the owner account that belongs to no business. It reads `DATABASE_URL` from `.env`, so set that first.

```
npm run super-admin -- you@yourcompany.com "Your Name" "a-strong-password"
```

Steps and what you should see:

1. Run the command. Expected output: `Created Super Admin you@yourcompany.com.`
2. Run it again with a different password. Expected: `Updated you@yourcompany.com: now an active Super Admin with the new password.`

3. Open /login, sign in with the new password. Expected: you land on the Platform Console, and the sidebar shows only Dashboard and Platform Console.
4. Check the Integrations card. Expected: Payment gateway, E-mail and Public web address all say Test mode, each listing the `.env` values still to add.
5. Try the old password. Expected: sign-in is refused.

In production, once your account works you can ignore or deactivate the demo `superadmin@liquor.com` (it only exists in a seeded database).

Test 2: add a customer who paid you directly

No payment gateway is needed. You record the payment yourself, with a reference, and access is extended by 30 days. Sign in as the Super Admin and use the Platform Console.

1. Click **Add tenant**. Enter the business name, plan **Standard** (or Pro), and the owner's name, email and a temporary password (8+ characters). Expected: the business appears in the table with its plan and a branch count of 0 / 3 (Standard) or 0 / 25 (Pro).
2. Click **Billing** on its row, then **Generate next invoice**. Expected: a PENDING invoice of Rs 2,999.00 (Standard) or Rs 7,999.00 (Pro) for a 30-day period.
3. Type your payment reference (bank UTR, UPI id or cheque number) and click **Mark paid**. Expected: the invoice turns PAID with your reference, and the row shows "Paid to" a date about 30 days ahead.
4. Open a private window and sign in as the new owner. Expected: they reach Business Settings; the plan card shows their plan, the billing card says In good standing, and the invoice is listed as PAID.
5. As that owner, add a branch under Business Settings. Expected: it works up to the plan limit; one more is refused with "Plan limit reached".
6. Check **Recent activity** as Super Admin. Expected: tenant.create, invoice.generate and invoice.paid entries with your name.

Do not leave a customer on the **Trial** plan if they have already paid you: a trial locks after 14 days unless you move them to Standard or Pro or extend their date (Test 3).

Test 3: renewals, extensions, locked business, support tools

Each row is one thing to try as Super Admin on a test tenant, with the result to expect.

What you do	Expected result
Monthly renewal: Billing, Generate next invoice, enter reference, Mark paid	New period starts where the last one ended; the paid-to date moves 30 days further

What you do	Expected result
Generate a second invoice while one is unpaid	Refused: there is already an unpaid invoice
Mark paid with an empty reference	Button stays disabled; the server also refuses it
Plan & limits: set Access until to a future date	Row shows that date as Paid to (paid plan) or Trial ends (trial)
Plan & limits: change the plan or branch limit	Limit updates; lowering it never removes existing branches
Set Access until to yesterday on a Standard tenant	Within 7 days the owner can still work (grace). After 7 days the owner sees only the payment screen and the row shows Payment overdue
Set a trial's end to yesterday	Owner signs in but sees only "Your free trial has ended" with Choose Standard / Choose Pro
Owner chooses a plan on that screen, then Pay now, then Simulate successful payment	Locked screen persists until paid; after paying the app opens and the plan switches
Suspend the tenant	Nobody there can sign in; existing sessions stop working; Reactivate restores them
Reset password on the tenant row	A 12-character temporary password is shown once; the old password stops working
Support sign-in on the tenant row	Amber banner "Support session"; 30 minutes; Exit returns you to the Platform Console; the audit list shows support.sign_in_as
Run billing job now	Message says how many invoices and reminders; running it twice sends nothing new

The Pay now button uses a test payment until Razorpay keys are added to `.env` (see INTEGRATIONS.md). Emails are stored, not sent, until `SMTP_HOST` is set: read them under Integrations, Recent e-mails.

Checklist and troubleshooting

Tick these off as you test.

- [ ] Super Admin created with the command and can sign in
- [ ] Super Admin sees only Dashboard and Platform Console
- [ ] Integrations card shows Test mode and the missing `.env` values
- [ ] Tenant added with its first owner; owner can sign in
- [ ] Invoice generated and marked paid with a reference; Paid to date is about 30 days ahead
- [ ] Owner sees PAID invoice and In good standing
- [ ] Branch limit enforced for the plan
- [ ] Access until extends a trial or paid period
- [ ] Expired trial and overdue tenant see only the payment screen
- [ ] Suspend blocks sign-in; Reactivate restores it
- [ ] Reset password and Support sign-in work and appear in Recent activity

If something looks wrong:

- **Sign-in says "suspended":** the tenant was suspended in the Platform Console. Click Reactivate.
- **Owner is stuck on the payment screen:** their trial ended or payment is overdue. Mark an invoice paid or set Access until.
- **The command cannot connect:** `DATABASE_URL` is missing or wrong in `.env`.
- **Login page shows the old screen:** run `npm run build:frontend` so the React app is served at `/login`.
- **No emails arrive:** expected until SMTP is configured; open Recent e-mails in Integrations instead.
